## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-14 are allowed.
2. The following is an examiner's statement of reasons for allowance: with respect to claim 1, in addition to other limitations in the claim, the prior art of record fails to teach, disclose or render obvious the applicant's invention as claimed, particularly the feature describing a first multiplexer which outputs the reference voltage in response to a reference voltage selection signal and an input signal generating circuit which generates an input signal used for testing in a test mode and outputs the input signal used for testing as the input data signal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Haycock et al. (6,639,426) discloses a simultaneous bi-directional input/output circuit having an output driver, a receiver and multiplexer for selecting a reference voltage, but there is no an input signal generating circuit which generates an input signal used for testing in a test mode and outputs the input signal used for testing as the input data signal.

Sine et al. (5,621,739) discloses a bi-directional input/output circuit having an output driver, a receiver and an input signal generating circuit which generates an input signal used for testing in a test mode and outputs the input signal used for testing as the input data signal, but no multiplexer for selecting a reference voltage and no comparison between an input data and the reference voltage.
